MILAN KHANAL

Senior Business Analyst | Product Owner

Enterprise modernization | Product discovery | AI-assisted prototyping

Dallas, TX | 214-516-5186 | milan.khanal25@gmail.com | linkedin.com/in/milankhanal41 | milankhanal.com

PROFESSIONAL SUMMARY

Senior Business Analyst and Product Owner with 10+ years of experience modernizing customer portals, billing, logistics and reporting systems. Hands-on partner to business users, designers and engineers, from understanding needs and shaping roadmaps and requirements to building prototypes and supporting delivery through testing, demos and release. Currently completing a B.S. in Human-Centered Artificial Intelligence at Texas Tech, applying that learning through AI-assisted prototyping and projects focused on usability, transparency and human oversight.

CORE COMPETENCIES

Discovery & Requirements: Field research, discovery workshops, as-is and to-be process mapping, gap analysis, user stories with acceptance criteria.

Product Delivery: Product ownership, backlog refinement, roadmaps and release planning, Scrum and SAFe, dependency coordination, UAT, release readiness and go/no-go.

Prototyping & Applied AI: AI-assisted prototyping, wireframing, human-in-the-loop workflows, explainability requirements, directing AI coding tools.

Tools: Jira, Azure DevOps, ServiceNow, Confluence, Power BI, Salesforce, Azure, AWS, Claude, ChatGPT, GitHub.

PROFESSIONAL EXPERIENCE

CRC Group | Dallas, TX

Senior Business Analyst | Project Manager (Consultant via Synergech) | Apr 2025 - Present

- Led discovery and the requirements backlog for replacing a legacy IBM billing system that handles $800M+ in annual billing. Built a working prototype of the future-state workflow that the product owner and billing staff used in requirements reviews. The program paused in March 2026 with the prototype and requirements kept for its restart.
- Coordinated the PaaS workstream that moved 10+ cloud-native applications across five environments after an acquisition, working with DevOps and platform engineering across time zones. Held the original September 2025 go-live when leadership expected to push it to January.
- Coordinated the 2026 migration of two acquired insurance systems (broker submission intake and claims management) into the enterprise Azure cloud, including change approvals, go-live readiness tracking, and a backlog for post-migration requests.

Toyota North America | Plano, TX

Project Lead (Consultant via Aquent) | Jan 2024 - Jan 2025

- Led the team building the planner and supplier portal within Toyota's North American planning-system modernization: wrote the user stories and acceptance criteria, ran refinement and the agile ceremonies, and coordinated with a separate McKinsey-led team that developed the machine-learning forecasting. The tool was a pilot when the engagement ended.
- Ran alignment sessions with product owners, business stakeholders and each team's McKinsey consultant to surface dependencies early and turn strategy decks into stories, a shared backlog and release roadmaps.
- With agile coaches, trained about five supply chain planners to act as scrum masters.

Dell Technologies | Remote

Product Owner | ESG Analytics (Consultant via Aligned Automation) | Jun 2022 - Apr 2023

- Owned the product roadmap for moving the Sustainability division's global carbon reporting from manual, siloed Excel workflows to a centralized analytics platform, which made customer carbon-footprint reports much faster to produce.
- Gathered feedback from analytics users to guide interface changes.

FleetPride | Irving, TX

Senior Business Analyst | M&A Integration | Nov 2021 - May 2022

- Gathered requirements with branch operations managers and managed the backlog for moving newly acquired branches onto the Karmak Fusion ERP system.
- Wrote user stories with acceptance criteria for the development team.

World Kinect Services | Miami, FL

Senior Business Analyst | Digital Transformation (Land & Aviation) | May 2016 - Nov 2021

- Analyzed customer-portal requirements with the product owner and worked with the UX designer and engineers on designs and refinement across the Billing, MDM and Logistics squads, as part of a two-year program that automated 80% of manual logistics processing in the Land division.
- Requested and ran field research in the Kansas City pilot, including driver ride-alongs, which found that drivers had no input into requirements and dispatch was overriding optimized routes. Shared the findings with leadership, designers and engineers, reprioritized the backlog with product managers, and worked with the vendor and data teams on device and customer-data fixes.
- Set up the first backlogs and agile rituals as the Aviation division moved from Waterfall to Agile, and worked with the delivery team replacing legacy Oracle 11i financial engines with custom fee and pricing tools.

SELECTED PROJECTS & APPLIED AI

AI Prototyping | Independent Projects and HCAI Coursework

Working prototypes at milankhanal.com.

- **TradePilot (independent project):** A supply chain risk simulation with five simulated AI agent roles. Defined the business rules, user requirements and human override controls, and showed the reasoning behind each recommendation.
- **TalentPilot (independent project):** Simulated candidate matching that shows recruiters the evidence behind each match, and models the disclosure and record-keeping requirements of NYC Local Law 144 and the EU AI Act.
- **NewsLens (HCAI capstone):** A news prototype that compares how different outlets cover the same story, showing which claims every outlet reports and which appear in only one, and explains its own AI in layers the reader can open. Evaluated against Microsoft's Guidelines for Human-AI Interaction and IBM's XAI Question Bank, with persona walkthroughs.

EDUCATION & CERTIFICATIONS

B.S., Human-Centered Artificial Intelligence, Texas Tech University (in progress), with a 4.0 GPA and President's List.

A.S., Information Technology, Dallas College, 2019.

Executive Certificate in AI for Digital Transformation, Cornell University (eCornell), 2024. Three-month program, six courses from Cornell Tech faculty, 84 professional development hours (8.4 CEUs).

SAFe 5 Product Owner / Product Manager (POPM), Scaled Agile, issued Jan 2022, expired Jan 2023.

AWS Certified Cloud Practitioner, Amazon Web Services, issued Nov 2020, expired Nov 2023.
